

Upgrade, Don't Replace

The Techbuyer Laptop Upgrade Service

The average laptop is used for 3 years. However, laptops and desktops provide up to 7 years of quality performance when regularly upgraded.

Extending the life cycle of your existing devices is the best way to boost performance and reduce costs over time. The Techbuyer Laptop Upgrade Service is a new business stream which does exactly that. Our approach is cost-effective, hassle-free and sustainable.

How it works + benefits

Up to 80% cost savings

Up to 7 years of quality laptop performance

3 year component level warranty

Large orders processed within 24 hours

Avoid sending useful technology to landfill

Impressive
long-term savings

How our service works:

Techbuyer installs quality component upgrades (SSD and RAM) into your laptops and desktops. This is the fast, cost-effective and hassle-free alternative to replacing your devices. We include a 3 year component level warranty and guarantee excellent reliability.

We have a simple 4 step process. This process repeats twice over 6 years on average, which halves the typical IT refresh rate. For example, rather than replacing your laptops after 3 years, Techbuyer can upgrade your SSDs and RAM twice within 6 years.

STEP 01

Laptops received at Techbuyer's engineering facility

STEP 02

Existing RAM & HDDs/ SSDs removed

STEP 03

New RAM & SSDs installed & systems tested

STEP 04

Laptops delivered back to you and the next cycle begins

Why did we create this service?

Today's IT managers are facing reduced budgets, increased demand, and changing workspaces. The Techbuyer Laptop Upgrade Service boosts performance whilst saving money.

Upgrading laptops and desktops is also the sustainable choice. The world generates over 50 million tonnes of e-waste every year, which is predicted to grow by 8% every year. This waste has a dramatic environmental impact, including carbon emissions and water pollution.

IT is a major contributor to this problem. IT hardware is made from finite materials including aluminium, silver, and precious metals. These are in politically unstable or short supply and are often mined illegally. There is little transparency when it comes to equal pay and working conditions.

Once this equipment reaches the business setting it is being replaced more frequently. This means that useful technology is being wasted far before its end of life. The environmental cost of this is significant.

To reduce the environmental impact of our IT, we have two main options. We can extend and manage the asset lifecycle of IT equipment by reusing wherever possible, and recycling as a last resort. Or we can extend the use phase of IT devices.

Our new service is an exciting solution for businesses, schools and organisations looking to maximise the lifespan of their laptops and desktops, whilst helping the environment.
